

FEATURED ALUM-A-LIFT STAINLESS STEEL FILTER HOUSING LIFT AND CART

PROJECT 27747

MODEL L200SS-72

FEATURING 316 Stainless Steel Construction, IP65 Washdown Rating, Notched Forkset, Assembly Cart

HANDLING 125lb [57 kg] Filter Assemblies

DETAILS Research and development for anti viral therapies requires the construction of large filtration assemblies weighing up to 125lbs. Alum-a-Lift provided a lift with stainless steel construction that can handle the intended load and endure the cleaning agents commonly used in pharmaceutical manufacturing facilities. Capable of being washed down with low pressure jets of water, the lift features a stainless steel cart for assembling the filters at a height comfortable for the operators. This application is a great example of Alum-a-Lift's ability to offer a turnkey solution to fit the operators' needs.
