

# FEATURED ALUM-A-LIFT PLATFORM LIFT WITH DUAL-STAGE TELESCOPING MAST

## PROJECT 29215

**MODEL** A1500CSLRPDT-72/60

**FEATURING** Powered Drive Wheel, Dual Stage Telescoping Masts, UHMW Platform

**HANDLING** 500lb [226 kg] Laser Assemblies

**DETAILS** Laser assemblies found in many process tools require infrequent maintenance, and can weigh several hundred pounds. It can be difficult to justify the cost of lifting equipment required to safely perform change-outs. A dual, telescoping mast was added to a lift with a simple low-friction platform. This allows a single lift to service all of the site's lasers, Traveling throughout the facility, and passing through doorways without sacrificing vertical lifting stroke.
